March 24, 2020

Dear Valued Business Partners,

Cornell Dubilier is a manufacturer of capacitors required for uninterrupted operation of the United States’ Critical Manufacturing Sector which is crucial to the economic prosperity and continuity of the United States. As part of this Sector, Cornell Dubilier manufactures capacitors for the military and is required by its defense customers to continue its operations. Cornell Dubilier is also a vital supplier of electrical components used throughout the United States’ other essential sectors, including the food, medical, energy and transportation sectors. The continuity in manufacturing of these components is critical during the National COVID-19 response.

Cornell Dubilier manufactures electronic capacitors that are used in ventilators, automatic external defibrillators, MRI machines, oxygen concentrators, surgical lasers, electric power distribution, military jets, radar systems, police equipment and refrigeration systems used in the distribution and storage of food supplies.

We are a critical part of these sectors’ ability to deliver goods and services and we are being asked to support and ensure their supply lines during this time of national crisis.

Sincerely,

James P. Kaplan
President, Cornell Dubilier Electronics, Inc.
